

PICOWIZ

It's time to get your skin

☐ Clear ☐ Brighter ☐ Younger

**When it comes to skin Brightening,
Picowiz treatment is always inseparable.
But does everyone really understand
Picowiz treatment?**

**Are there any side effects?
Will it rebound?
Will my skin become thinner after treatment?
Does it really shrink pores, rejuvenate skin
and even out skin tone?**

PICOWIZ Technology

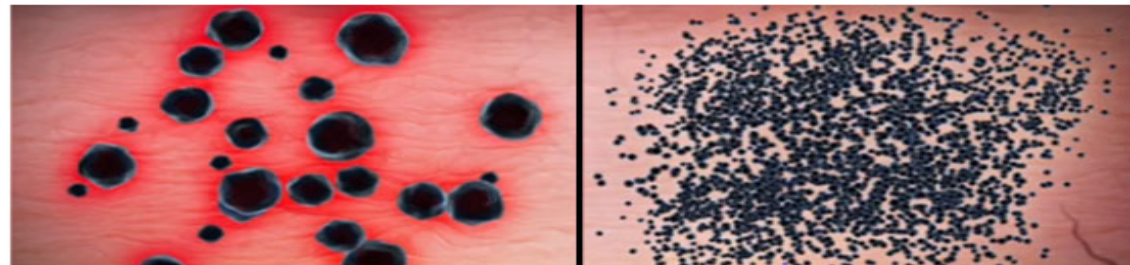

PICOWIZ uses state-of-the-art laser technology to treat hyperpigmented and aging skin and remove tattoos.

Stand out from the honeycomb laser to break down pigment particles into small molecules.

Picosecond lasers work in picosecond pulses, breaking the particles into a very fine "dust-like" and breaking down the melanin and pigment particles.

The process is safe, simple, comfortable and fast

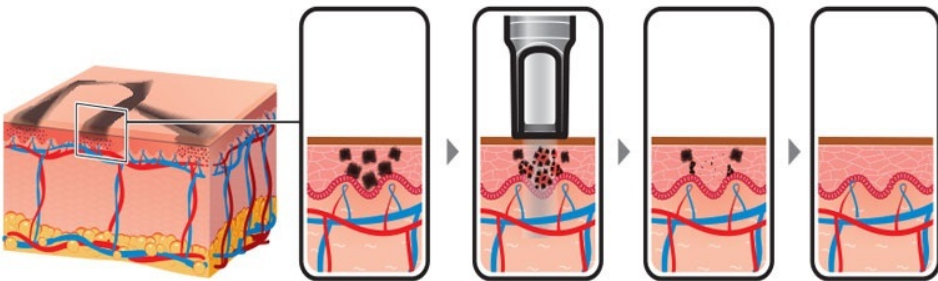

Laser breaks melanin granules

PICOWIZ Theory

TREATMENT THEORY

PICO LASER uses ultra-short pulses to hit the melanin with a great pressure, the melanin shatters into tiny particles. They are more readily absorbed and eliminated by the body.

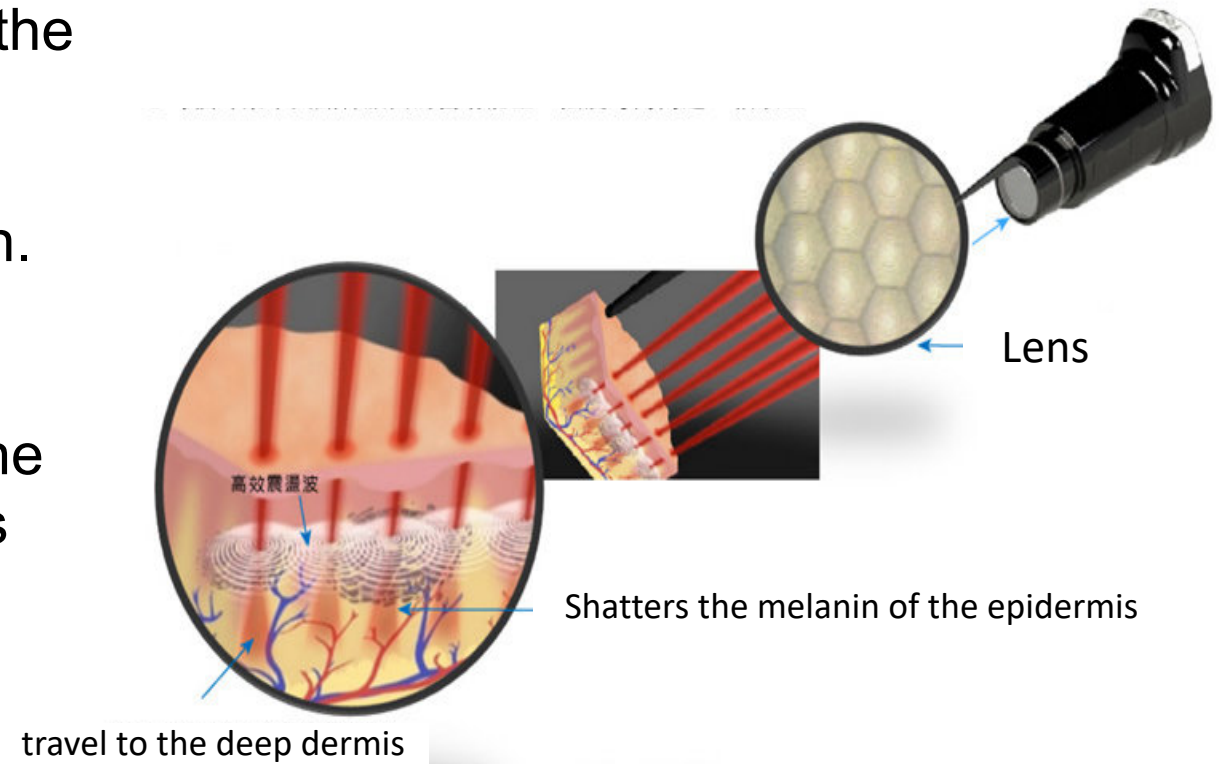

PICO LASER is a quick and easy non-surgical, non-invasive laser skin treatment for the body including chest or décolletage, face, hands, legs and more

New Fractional probe helps treatment more effective, safer

Each area is redistributed by 130 micro lenses. Fractional Lens probe of PICOWIZ energy can highly concentrate the laser beam and reduce the energy demand, so that the skin tissue can achieve 20 times the treatment effect of the standard dose under high energy concentration.

Fractional Lens probes are suitable for face, shoulders, hands, arms, etc. The pain during the treatment is low and almost no recovery time is required.

Compared to traditional lasers, the pigment removal effect is also better than ever.

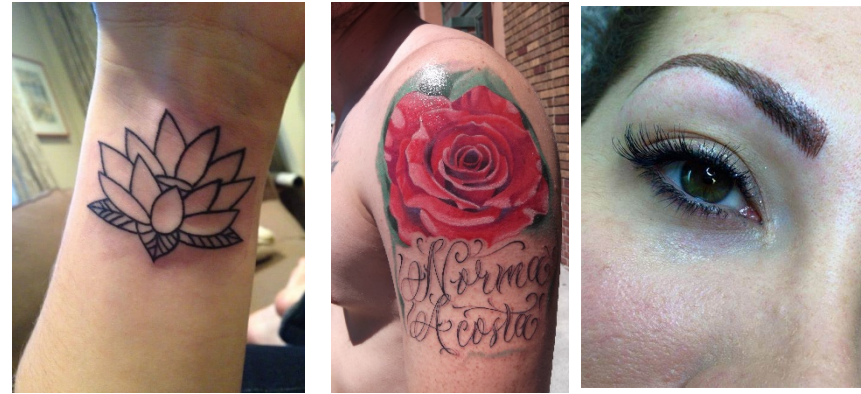

➤ ENDOGENOUS PIGMENT

- Nevus of Oto
- Ito
- Mongolian Spot
- Brown-Blue Pigmentation
- Melasma
- Coffee spots
- Seborrheic keratosis Post inflammatory Hyperpigmentation
- Freckles
- Abnom

➤ EXTERNAL PIGMENT

- Body tattoos
- Eyebrows
- Eyeline
- Lipliner tattoos
- Traumatic tattoos

➤ SKIN

- Refine pores
- Even skin color
- Whitening
- Blemishes and oil control

PICOWIZ Differences from traditional lasers

Result

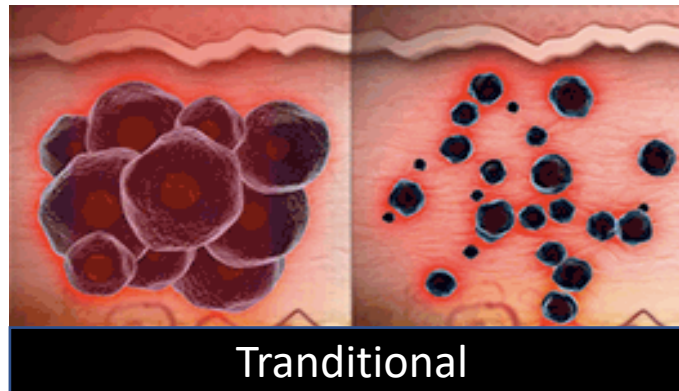

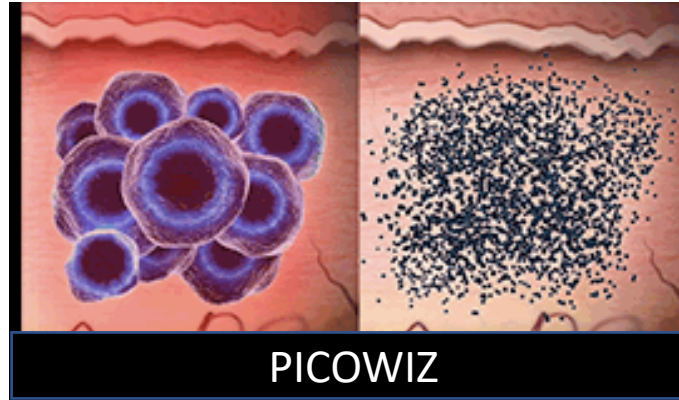

- These two depigmentation methods keep your skin looking youthful and supple after treatment
- **PICOWIZ** Employs the most powerful laser in a highly controlled system that provides safe and effective results

PICOWIZ Differences from traditional lasers

PICOWIZ

- PICOWIZ enables adjustment and precise targeting of all treatment areas
- PICOWIZ is customizable and fast and efficient
- Targets only imperfect skin layers and unhealthy cells without damaging surrounding skin

Traditional Laser

- Traditional lasers can modulate and precisely control the spots on the skin's surface only to be treated
- For melasma, deep acne scars, tattoos and other deep or uneven skin tone, Picowiz is better than traditional laser .

PICOWIZ The advantages

- Flat Top Cap Output

Spots Light spots are more evenly dispersed, covering a larger area with greater intensity for a more even and natural skin rejuvenation effect

- Safe, fast, and effective

removal of pigmentation Works on all skin's endogenous and external pigmentation for dramatic results

- Fast treatment

The spot diameter is 2-10mm and the speed is up to 10Hz. The focusing speed of cellular picosecond lasers is 10 times that of conventional lasers.

- No risk of darkening

The speed and power of PICOWIZ reduces thermal damage to the skin. Low risk of stimulating melanin reaction, which reduces skin darkening.

PICOWIZ The advantages

- **Depigmentation and Repair Principles** Propagating vibration waves to the skin, preventing melasma while repairing and promoting collagen synthesis
- **No melanin precipitation** Using ultra-short pulses to break melanin with high pressure, melanin is broken into fine dust-like particles by concentrated energy, which are easy to absorb and naturally eliminated by human metabolism, and gradually disappear.
- **Excellent treatment results** Fast recovery, almost no downtime and long-lasting results. Skin reconstruction and rejuvenation
